Product introduction

The Electronic Cigarette is a nonflammable electronic atomizing device, adopts the advanced microelectronic technology and supercritical physical atomized technology, to atomize the high-purity nicotine diluent, which is extracted from tobacco and has the exciting function, so that smoker can take it in. The liquid in the cartridge contains nicotine, perfumery compound special for cigarette and ordinary food additives. It can refresh the smokers and satisfy their smoking.

The essential differences between the Electronic Cigarette and the ordinary cigarette are as follows:
1. No tar and other carcinogenic substance or harmful ingredients to human body.
2. No ignition required, without the over 4000 harmful chemical substances produced by an ordinary cigarette.
3. Harmless to other and the environment, without the danger of second-hand smoking.
4. No possibility to cause fire. It can be used safely in most No-smoking places.
Cautions

1. Keep it away from high temperature environment.
2. Keep it and its special components out of children’s reach, and avoid improper operation.
3. For people with adverse reaction after using this product, it is recommended to use the cartridge with lower nicotine content or no nicotine.
4. Please do not direct contact with the nicotine liquid contained in the cartridge.
5. Please prevent the battery from mixing with metal articles.
6. It’s better to smoke the Electronic Cigarette according to the time and frequency of smoking ordinary cigarette.
7. Don’t use the Electronic Cigarette while driving.
8. When try to clean the charger, you must unplug it from the power supply beforehand.

Description of the product

1. Structure of the Electronic Cigarette body
   The Electronic Cigarette body is composed of battery, shell, atomizer, and cartridge.
Description of the product

2. Cartridge
The cartridge is composed of an inhaler and a liquid container. The liquid container contains nicotine diluents which are ready to be atomized; it does not contain ingredients harmful to human body, such as tar and carcinogenic substance.
According to nicotine content, the atomized cartridges are classified into four kinds: high, medium, low and zero. Cartridge with high, medium or low nicotine content are only used as the substitute for cigarette during smoke abstention, and the cartridge free of nicotine is for long-term use.

3. Battery, USB charger and adapter
The Electronic Cigarette employs a 4.2 V special lithium battery.
The battery can be recharged over 300 times.
The input supply voltage of the USB charger: AC100-240V, 50/60Hz, output: DC 4.2 V 0.4A.

Operation

Installation method:
Step 1: Connect the atomizer to the battery.
Step 2: Connect the shell to the battery.
Step 3: Pull out the empty cartridge, then put a new cartridge into the atomizer.

NOTE: Do not rotate so as to avoid damage to the atomizer. After put the cartridge into the atomizer.

Step 1  Step 2  Step 3
Different from other Electronic Cigarette, it has a special manual switching device. Hold down the switch, to trigger the circuit, will be able to heat atomization wire work. Then the electronic circuit will start to work as the Electronic Cigar is inhaled by mouth. Stop inhaling or not hold the switch will terminate the atomization, and the operating mode will turn to standby state. It is recommended to place it horizontally and don’t keep it upwards, so as to prevent you from inhaling the liquid into your mouth, which many cause stimulus to your oral mucosa.

**Operation**

**Smoking method:**
Press down the switch button, then the switch LED light is on. You can enjoy smoke the Electronic Cigarette. If you stop pressing the switch button, the Electronic Cigarette will stop work.

**Frequency:**
Smokers smoke each ordinary cigarette by 14-16 mouthfuls, so after smoking 14-16 mouthfuls (equal to an ordinary cigarette) of the atomized cartridge, smoker should stop smoking about half an hour before smoking again.
Use of battery and charger:

The full battery can provide energy to suck about 700 mouthfuls. If the switch LED light flash 30 times, the Electronic Cigarette stops work, which indicates that the battery needs charging.

Connect the battery to the USB charger. The battery flashes 10 times when the battery is charged. Then the USB light is red. If the battery is fully charged when the USB light turns blue from red. The charging time is about 2 hours. Take the battery out and cut off the charger’s power supply.

Precautions for use of battery and charger:
1. Keep the battery away from high temperature when charging.
2. Don’t connect the battery with metal, to prevent short circuit.
3. Do not weld the battery directly and pierce through the battery with nails or other edge tool.
4. In case of battery’s leakage happens, if your eyes contact with electrolyte leaking from the battery, don’t rub it. Please wash it with clean water immediately and ask for doctor’s help.
5. If the battery peculiar smells, burns, changes color, deforms or any other unusual case happen during charging, cut off the power supply, and take the battery out from the device or charger and stop using.
6. The charger can be used for the special lithium battery of the Electronic Cigarette only; please don’t use this charger to charge other types of batteries.
7. If the Electronic Cigarette is not to be used for a long period of time, take the battery out from the device or charger. Keep the battery stored alone in a low temperature and dry place after fully charged.
Notices to use

1. If every time the user press the switch button more than five seconds, the switch button light will continuously flash 8 times, then the Electronic Cigarette stops work, warning you to reduce your inhalation time.
2. When the switch LED light flashes 30 times during use, the battery needs charging.
3. Replace the cartridge with a new as the smoke volume is reduced.
4. The charger can work in a normal condition with the voltage at AC100V-240V, 50/60Hz.
5. Keep the Electronic Cigarette separated from other articles and avoid collision.
6. The Electronic Cigarette never needs to be lighted. So it can be safely used in public places.
7. Once some problem occurs in this product, please have it repaired in the designated repair sites, and don’t dismantle it by yourself, which will bring damages to it and endanger yourself.

Suitable user and forbidden user

Suitable user
* The people who have been smoking for a long period of time, and suffering uncomfortable feeling.
* The people working in no-smoking places but with the habit of smoking.
* The smokers who want to quite smoking. Painless smoking abstention can be realized gradually by decreasing nicotine content.

Forbidden user
* Under 18 years old
* People without the habit of smoking.
* People sensitive to nicotine or any other ingredients in the inhalant.
* Pregnant and breast feeding women.
* The patients who should avoid smoking.
Troubleshooting

1. When the switch LED light flashes 30 times during use, the battery needs charging.
2. When the smoke volume is reduced, please change a new cartridge.

Note: After the above solution, if the failures still remain or you feel uncomfortable during use, please stop using immediately, and contact the sales agent or our company.
